WILLIAMSOUND

“

I bought the Pocketalker for my 89 year old father and was in tears at the look on his face when he could hear and understand me again. We put on some old music he used to love and he just sat there with a smile on his face.

Thank you for giving my father back to me!

”

Verified Customer Review

Pocketalker vs. Hearing Aids

A **hearing aid** is used to **amplify all sounds**. It is prescribed and tailored based on an individual's audiogram and may require periodic adjustments by an audiologist.

The **Pocketalker** personal amplifier is used to **amplify specific sounds or voices**. Simple controls allow users to adjust tone and balance to their needs without requiring a prescription or help from an audiologist.

WILLIAMSOUND

Hear the important things in life

Simple Design. Personalized Listening.

The Pocketalker is designed to provide a personalized, easy-to-use listening experience. Use the control to adjust the volume of the sound up to 120 decibels, which is twice the level of a normal conversation.

Further personalize your listening experience to enhance sound clarity using tone control to adjust low and high-frequency sounds and the balance control to adjust the sound levels in each ear.

Easy-to-use intuitive design

Long-lasting power

Adjustable tone control for improved clarity

Ergonomic, lightweight design

Simple maintenance
