

# CAPTION ASSIST

## VISUALIZE WHAT'S BEING SAID

Caption Assist is an AI-based, real-time, in-person, open captioning and text archiving system. Powered by Google's artificial intelligence platform, Caption Assist has the ability to transcribe up to 27 languages and 70+ dialects with up to 94% accuracy.

The Caption Assist is an alternative solution for assistive listening needs and has the ability to enhance learning experiences in education and corporate markets that use video presentations, online training, webinars and video calls. It is also ideal for live in-person applications in markets such as houses of worship and courtrooms. The benefits of captioning make Caption Assist a great fit for people who are visual learners, learning a new language or are hard of hearing.

### Features:

- Real-time open captioning
- 27+ available languages and >70 dialects
- Billing handled directly on app using the Google Play or Apple App Store on any iOS and Android device
- Flexibility to change text size, color, background, location and alignment
